LAUTARO PEREZ HERRERA

Full Stack Engineer — TypeScript · React / Next.js · Node.js · Python · AI integrations

La Plata, Argentina • +54 9 221 364 1472 • lautaroph@gmail.com • linkedin.com/in/lautaroperezh • github.com/lautaroPH • lautaro-portfolio.vercel.app

SUMMARY

Full Stack Engineer with 4+ years of experience building AI-powered SaaS products and business automation from MVP to production, working as an independent contractor for companies in the United States, Europe and Latin America. Strong in TypeScript, React, Next.js and Node.js, and in Python/FastAPI on the backend, with hands-on experience integrating LLMs (Claude, OpenAI), building MCP servers, extracting data from documents and invoices, and integrating payments (Stripe) and communication APIs (Meta, Telnyx). Comfortable owning features end to end and working directly with founders and product stakeholders in remote, cross-timezone teams.

PROFESSIONAL EXPERIENCE

Full Stack Engineer — Caliper Labs *Aug 2026 – Present*

Independent Contractor (Remote) — Software agency, clients based in Argentina

Caliper Labs is a software agency. Through it I build AI-powered products and internal tools for its clients (car dealership groups, a law firm, an industrial machinery dealer and a construction company) across ~25 services in Python, TypeScript and Next.js.

- **S.AP Gestión Jurídica:** core developer of a multi-tenant cloud case-management platform for law firms (FastAPI, SQLAlchemy/Alembic, PostgreSQL, Next.js), including a pipeline that pulls court notices from the court portal, extracts the key data with Claude, fills the writ template and registers the case automatically.
- **Bank reconciliation:** built an engine that parses bank-statement PDFs and ledger exports, matches them in multiple passes, breaks down bank fees and taxes (VAT, IIBB, Law 25.413) and sends unresolved items to Claude.
- **Arboleya Maquinarias:** automated supplier-invoice intake from photos, PDFs and email (ARCA QR + Claude vision) with validation, duplicate detection and human approval before posting to the Colppy accounting API.
- **Car dealership groups:** built MCP servers and REST APIs over dealership management and savings-plan systems, powering an iPhone/iPad app, a web dashboard and a Claude assistant (also via Siri), read-only and with each dealership's tokens kept server-side.
- **Kavos Constructora:** built a financial dashboard in Next.js fed by the company's Google Drive spreadsheets, with an AI chat that answers questions about the numbers.
- **Set up org-wide engineering standards:** reusable GitHub Actions CI, security scanning, CodeRabbit reviews, coding-agent instructions (AGENTS.md / CLAUDE.md), a per-repo security audit playbook and OpenTelemetry → New Relic monitoring.

Full Stack Engineer — Ninjō *Feb 2025 – Jun 2026*

Independent Contractor (Remote) — Clients based in the USA and Latin America

Built core features of an AI-powered communication and business automation platform (ninjo.ai) that lets companies centralize customer conversations, automate workflows and manage every channel from one dashboard.

- Designed and developed AI-powered workflow automation with the OpenAI API, letting businesses automate customer support, lead qualification and internal processes.
- Architected integrations with Meta APIs (WhatsApp Business, Facebook Messenger and Instagram) for unified omnichannel communication.
- Built Stripe billing infrastructure: subscriptions, checkout flows, payment processing and customer lifecycle automation.
- Developed Telnyx integrations so customers can buy, configure and manage phone numbers directly from the platform.
- Designed event-driven automation with webhooks, triggers and asynchronous workflows across third-party services, plus secure file storage on AWS S3.
- Contributed to a multi-tenant RBAC architecture for agencies and organizations, and worked directly with the US and LATAM founders on architecture, planning and production deployments.

Full Stack Developer — MyGuide Holiday *Sep 2023 – Jan 2025*

Independent Contractor (Remote) — Client based in Europe

Built from the ground up a Next.js platform for a European tourism company that lets travelers explore and book activities across multiple destinations.

- Developed the full platform in Next.js and TypeScript from Figma designs, in 4 languages, covering customer booking flows and internal tooling.
- Implemented authentication and registration plus a secure payment gateway that issues electronic tickets for confirmed bookings.
- Designed the data layer and API for activities and bookings, and a role-based access system for admins and partners.
- Set up isolated staging environments to test new features safely, and iterated with the founder and design team on user feedback.

Full Stack Developer — Chenkster *Feb 2023 – Feb 2024*

Independent Contractor (Remote) — Client based in Europe

Hired by the founders to build an MVP from scratch and take it to a production-ready, AI-enabled product.

- Built the frontend with React and Tailwind CSS and the backend with Supabase, covering data modeling, auth and API design.
- Integrated AI features into the core product, iterating quickly on founder feedback, and optimized performance before launch.
- Set up testing/staging environments, deployed to production and provided support and maintenance after launch.

Full Stack Developer — Marina Tortarolo Real Estate Company *Sep 2022 – Jan 2023*

Independent Contractor (Remote) — Client based in Argentina

Led development of the public site and an internal admin dashboard for a real estate agency.

- Built the frontend and an admin dashboard with full CRUD so administrators manage property listings.
- Migrated the codebase from React to Next.js, significantly improving performance and SEO.

TECHNICAL SKILLS

Languages & Frameworks: TypeScript, JavaScript, Python, React, Next.js, Remix, Node.js, Express.js, FastAPI, Go

AI: Claude (Anthropic) API, OpenAI API, MCP servers, LLM tool use, document and vision extraction

Databases: PostgreSQL, MySQL, MongoDB, Supabase, Firebase, SQLAlchemy / Alembic

Integrations: Stripe, Meta APIs (WhatsApp / Facebook / Instagram), Telnyx, AWS S3, Google Drive, webhooks, web scraping

DevOps & Tools: Docker, Railway, Vercel, GitHub Actions, OpenTelemetry / New Relic, pytest, Git, Tailwind CSS, Figma

LANGUAGES

English (Full Professional) • Spanish (Native)
